Submitted by clickgem

Smart Contract Audit Report  
2018-07-10 Quantstamp version 0.1

## ClickGemTokenERC20

0xf024628c7bf1ffec7ca184026cd0764ac11ba22f

Completed on 2018-07-10 | Quantstamp version 0.1

1 contract was audited

0 warnings were detected

[How to read this report \(PDF\)](#)

### Vulnerability Review

Number of warnings

<b>REE</b> Re-Entrancy	0
<b>SDC</b> Self-Destructing Contract	0
<b>TOD</b> Transaction-Ordering Dependence	0
<b>TID</b> Timestamp Dependency	0
<b>ASF</b> Assertion Failure	0

**What you are looking at and why it matters.**

This report lists the potential vulnerabilities found in the smart contract you submitted as well as any library contracts it called. We also give hints to the developer about how to write better contracts. To the extent that that any software or components in the library contracts are subject to open source or other third party license terms, you are responsible for reviewing and determining compliance with such terms.

Our mission at Quantstamp is to give you the knowledge and power over your own security. By creating automated tools and allowing you to release the reports to the public, we hope to give you the tools to protect the projects you care about, and ask good questions.

This report is our first iteration out of many, feedback is appreciated.

While Quantstamp Demo delivers good but not-yet-perfect results, our contract reports must be considered as one element in a more complete security analysis. A warning in a contract report indicates a potential vulnerability, not that a vulnerability is proven to exist.
